Outline:

This select committee hearing will focus on Cybersecurity for Small Business and Professionals. While the news media and the public regularly hear about breaches at large companies, the threats to small businesses and professionals are just as prevalent and can be far more devastating. The goal of this hearing is to understand the threat trends to small business, what best practices or tools can be used to minimize a small business’s vulnerability, and to explore how this information can be communicated across the state and across sectors to address this threat to our world-class economy.
